

OBD touchscreen topometer T0400

This measuring tool is plugged into the OBDII socket of recent vehicles.

It enables precise distance measurement **without requiring the installation of a sensor on a wheel.**

Calibration is very easy to do, fast and precise. 10 calibrations can be stored if the device is shared between several vehicles.

Distances can be fixed and corrected, to the nearest meter, with the touch screen.

It allows direct calculation of road surfaces by indicating road widths.

Compatible vehicles (PV ou CU) :

- Peugeot / Citroën group (whose last Opel) with automatic management of reverse gear,
- Fiat group,
- Renault, Nissan ...
- other vehicles are also compatible, please contact us.

The installation/unintallation on the OBDII socket is done in **2 minutes** without damaging the vehicle for power supply and taking speed and mileage information.

A CRISARTECH topometer is :

- A display made in **Germany**, software and accessories in **France**, a **guarantee of quality and very high level** pre/after sales service,
- **ergonomics of the highest order** (touch screen, menus, pop-up...),
- **excellent readability thanks to the color**,
- **Multilingual menus and configuration** (F/GB/E/D/I).

The options :

- Suction cup holder,
- Bracket to be screwed onto the dashboard
